

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. PREFACE.

In this era of reduced postal and telegraphic rates, concessions to the important principles of economy and expedition in the means of communication by mail and telegraph, the publication of the Anglo-American Code meets an urgent demand.

It is the outgrowth from what, at first, consisted of various special codes, adapted to special businesses, which were quite limited in scope, and later, of more general codes of wider scope. At last a demand comes for one which will embrace all subjects of correspondence, and this work is designed to meet it.

The *expense* and *publicity* entailed in the use of the telegraph are recognized as serious obstacles. This work will cause a great diminution of these, in many cases practically eliminating them. Embracing as it does, social and domestic, as well as business and miscellaneous subjects, a large proportion of correspondence which is now conducted through the mails, can, through its medium, at slight expense, be conducted, confidentially and quickly, by telegraph.

Its use will also be recognized as an important means of confidential communication, not only in telegrams but also in letters and postal cards.

This system will be found to be a novel one to the greater part of the public, but it is believed that its usefulness and importance will be promptly recognized while its simplicity makes it available for every one.

<i>Anes</i>Must have answer immediately

EXPLANATION.

Embodied in the ordinary telegraphic form, the above telegram I. reads—
In reply to your letter of 1st of August, I wish to say that if he will make a reasonable abatement I will consider the matter. What is your view? Can it be done safely? I will take upon myself the entire responsibility. Let me know as soon as possible. If it can be done make the best terms possible. Answer by the Anglo-American Code. And II. reads—The matter can be arranged as per your telegram. It can be done safely. You can get some abatement. It will be necessary to act immediately. Will make the best terms possible. May I draw on you for what amount of money is required? Must have answer immediately.

In cypher the above telegrams would read I.—Legend, Attainder, Abduce, Viary, Sadr, Tailzie, Kesita, Dombeya, Thorn, and Andarac, and II, Mend, Tartish, Sagatus, Abele, Narrate, Advolation, Tinct, Dracanth, Moslings and Anes.

The above sentences have been selected hap-hazard, but with a view to their consistent construction as a whole.

*Dashes are to be filled in the order of their occurrence by the immediately succeeding cypher words.

The order of the arrangement of the whole book is alphabetical—subjects in alphabetical order—sentences under them also.

Blank leaves with cypher words are provided for the insertion of additional or special material.

With regard to secrecy in the use of the code, this object can be reached easily, ordinarily by the methods generally employed in the use of all codes. Two or more correspondents can arrange to read so many lines up or down, or so many pages backward or forward. Many ways can be devised to vary from the ordinary method of sending and receiving. While these methods would ordinarily be sufficient, in the event of absolute secrecy being important, the use of the *duplicate cypher column* * would be the only certain safeguard.

* The duplicate cypher column is a patented design owned by the Anglo-American Code & Cypher Co., and consists of a duplicate column which can be altered by shifting the relative position of the words and thus making a purely arbitrary cypher between two or more correspondents.
